Do you miss your Lego blocks? Did you ever spend hours building cool models digging into piles of colourful bits and pieces? Do you think of that when you build beautiful code?

At MakerBrane, we're building the future of toys on a software-first platform. We're on a mission to democratize toy creation by letting anyone anywhere design, build, and sell their own buildable playworlds.

Our mission needs its own building blocks: expert and versatile team players. When you join MakerBrane, you'll enter a creative and challenging environment where transparency, opinion, collaboration and innovation are actively encouraged.

This is your chance to join a funded, award-winning startup at an early stage where your expertise will help shape the future of the business.

As SENIOR DEVELOPER, you will work closely with the founders, CTO advisor, product manager, UX/UI, and junior developers to define, refine, and build new features and integrations over our existing solution and our as yet undisclosed products. Your responsibilities will be diverse and we are positive that you will be enthusiastically and continuously challenged.

If our mission excites you as much as it does us (and our investors and users), we'd love to have a chat!

Send a CV and a quick paragraph about yourself and why you'd want this position to [jobs@makerbrane.com](mailto:jobs@makerbrane.com)

**Must have Skills:**

- Proficient in PHP with experience in one or more frameworks (such as Wordpress, Symfony, Yii, Laravel, ...)
- Proficient in Javascript with experience in one/many frameworks (such as React, Angular)
- Experience working with relational databases (such as MariaDB, MySQL, Postgres) with large data sets and writing SQL
- Knowledge in Linux server administration
- Excellent understanding of version control, GIT, and best practices of utilizing it for teams
- Experience in managing projects and able to lead technical team deliverables and tasks
- At least 4 years of active coding experience

**Nice to have Skills:**

- Understanding of 3D graphics and/or game dev frameworks (such as Three.js, A-Frame, WebGL, Unity)
- Working knowledge of data mining tools (such as Tensorflow, python, R)
- Working knowledge of different kinds of NoSQL databases (such as neo4j, memcache, mongo)
- Translating requests and strategies from non-technical members to technical deliverables
- Working knowledge of different hosting architecture and deployments (such as docker, S3 integration, load balancing)

**Perks we offer:**

- Curious and creative team of different nationalities passionate about changing the global toy industry
- Dedicated senior CTO advisor to help you grow and deliver
- Super cool office space, a 3D printer and all the toys and books you can imagine
- Smack in the heart of Beirut tech scene providing you with conferences, seminars and like-minded techies
- Medical insurance
- Free Parking, Gym, Basketball, Baby-foot, and Ping-pong
- Access to international conferences and meetups
- Snacks, proper coffee and regular free lunches
